DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 2003-512147 A [translation] assigned to Hollingsworth & Vose Air Filtration LTD (*Hollingsworth*) in view of JP 2002-348480 A [translation] assigned to Toyobo Co., Ltd. (*Toyobo*).

3. Regarding claims 1-2, *Hollingsworth* discloses a charged filter material comprising at least 20 mass% of polyester fiber and at least 30 mass% of polyolefin fiber (paragraphs 6-13).

4. *Hollingsworth* does not explicitly disclose that the charged filter material is friction charged. Nevertheless, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have the charged material be friction charged, since it was known in the art that friction charging a filter is a useful way to capture fine particles in the air (see Applicant's specification page 1, lines 15-22).

5. *Hollingsworth* does not explicitly disclose phosphinic and/or sulfonic acid copolymerized with a polyester molecular chain. *Toyobo* discloses that phosphinic and copolymerized with a polyester molecular chain increases the fire retardancy of the filter

material (see *Toyobo* claims; paragraphs 6-7, 15-17, and 23). It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the charged filter material, of *Hollingsworth*, so that phosphinic acid is copolymerized with a polyester molecular chain for the purpose of increasing the fire retardancy of the filter material.

6. Regarding claims 3 and 4, *Hollingsworth* in view of *Toyobo* discloses a filter material with the same preferred structure as contained in Applicant's claims/specification; therefore, it is inherent that the filter material is self-extinguishing in the combustibility classification according to JIS D 1201 (1977) method of combustibility test for organic materials disposed in automobile compartment. See MPEP 2112.
